Abstract

The paper deals with the issue of logistic management redesigning the distribution branch of petroleum products. It highlights the policy and quality objectives and also the logistics key process in terms of the purpose as well as the activities included within each process. The main lines of actions show that the top management branches direct the overall activity distribution of petroleum products to meet the needs of its customers and other stakeholders through continuous improvement of efficiency, effectiveness of the management system quality and its processes.
INTRODUCTION

The current Quality Management System is based on the principles of modern logistics, being developed and implemented accordingly. Therefore, we will present the policy and quality objectives and the logistics key processes in terms of the purpose and the activities included within each process as well as the responsibilities and authorities involved as well as the development sheets of each process.
The top management branches direct the overall activity distribution of petroleum products to meet the needs of its customers and other stakeholders through continuous improvement of efficiency, effectiveness of the management system quality and its processes.

LINES OF ACTION

The main lines of action needed to achieve general - customer satisfaction - are:
Promoting the "importance of being aware" in meeting customer requirements and legal and regulatory requirements is one of the goals.
Ensuring that the continuous improvement is the main objective of the branch, that the processes and the continuous improvement of QMS is the driving force for the overall performance of the branch.
Identifying the processes leading to achieve the services / products that provide added value to the branch is very important.

Establishing and implementing the criteria and methods needed to ensure that both the operation and control of these processes are effective.
Setting specific goals that lead to a better performance of the branch.
Ensuring quality in the branch and planning processes in order to achieve effective QMS quality objectives and requirements for quality of service / product provided.
Ensuring functional structure and adequate resources to achieve the objectives set.
Ensuring the effectiveness and efficiency of monitoring and measuring the process capability of the branches performance and the customer satisfaction.
Regular and systematic analysis of the data and information on the adequacy of policy and quality objectives SMC efficacy, conformity of products / services and customer satisfaction requirements.
Establish and implement actions to continuously improve the effectiveness of the QMS, processes developed to increase customer satisfaction.

THE MAIN OBJECTIVES

Table 1 illustrates the main objectives of the management program, the performance indicators and their measurement mode as well as their responsibilities towards achieving these goals:

**TERMINOLOGY AND ABBREVIATIONS**

The terms used in MC and defining their content comply with quality standards (EN ISO 9000:2001) and other reference documents. For a better understanding we specifically retained following definitions:

**Quality** - the extent to which a set of inherent characteristics fulfills requirements.

**Requirement** - need or expectation that is stated, generally implied or obligatory.

**Product** - the result of a process.

Customer satisfaction - The customers perception of the extent to which the customer requirements are met.

Quality management system - management system which directs and controls an organization in terms of quality.

Quality Policy - intentions and guidelines of an organization related to quality as formally expressed by the management at the highest level.

Continuous improvement - repeated activity to increase the ability to fulfill the requirements.

Organization - A group of people and facilities with a range of determined responsibilities, authorities and relationships.

Client – An organization or an individual that receives a product.
Process - a set of interrelated or interacting activities which transforms inputs into outputs.
Procedure - specified way to carry out an activity or a process.
Traceability - the ability to trace the history, application or location.
Compliance - fulfillment of a requirement.
Non-compliance - failure of a requirement.
Preventive action - action to eliminate the cause of a potential nonconformity or other undesirable potential situation.
Corrective action - action to eliminate the cause of a detected nonconformity or other undesirable potential situation.
Quality Manual - a document that describes the quality management system of an organization.
Audit - a systematic, independent and documented process for obtaining audit evidence and evaluate them objectively to determine the extent to which the audit criteria are fulfilled.
Audit criteria - a set of policies, procedures or requirements used as a reference.
Audit Evidence - Records, statements of fact or other information that is relevant to the audit criteria and that is verifiable.
Knowledge - demonstrated ability to apply knowledge and skills.
Measurement process - set of operations having the object of determining the value of a quantity.

Efficiency - the relationship between the result achieved and the resources used.
Effectiveness - the extent to which planned activities are realized and planned results are obtained.
Compartment - generic name for entities in the organizational structure.

Abbreviations are as follows:

QMS - Quality Management System
MC - Quality Manual
RM - Management Representative at the highest level
DS - Branch Manager
BRML - Regional Office for Legal Metrology
DMM - measuring and monitoring devices
ROF - Organisation rules
BVC - Budget of Incomes and Expenses
IL - Work Instructions
PS - System Procedures

PP - Process Procedure
OP - Operational Procedures
